To The Recruiter Manager  
Infosys

Respected Sir / Ma'am,

I'm writing to apply for the Internship that was advertised on Infosys's LinkedIn page. My skills, as illustrated in my resume, make me an excellent candidate for this program, in my opinion. I am a quality-conscious undergraduate student at Amity University ( B. Tech in Computer Science & Engineering). My professors and colleagues have consistently recognized me for my diligence in my academic career. I have gained established analytical, technological, and critical thinking skills while working on academic and extracurricular projects, which I hope to leverage through the aforementioned internship program at your business.

My career has been built on the basis of online certifications and academic coursework. Via these sources of expertise, I have gained experience working in Python and SQL. I am an expert in Machine Learning and am enthusiastic about gaining insights from results. I had the opportunity to work as a Data Science and Business Analytics Intern at a Company (The Sparks Foundation). In addition, I have written a research paper on Machine Learning, Data Analytics, and Data Visualization. In my previous experiences, I've always worked hard to derive human-centric perspectives from info, and I'm excited to do the same in my future endeavors.

Furthermore, I believe that my knowledge of design and prototyping, as well as my experience with Front-End Web Development, would make me an excellent addition to a cross-functional team. This curriculum will be a valuable addition to my educational portfolio, providing me with business experience. Thank you for your consideration and I look forward to hearing from you soon.

Sincerely,  
Yash Garg
